

Business Requirements

Functional Requirements

ID	Requirement
FR-01	System should automatically assign tickets
FR-02	System should prioritize tickets based on severity
FR-03	Agents should receive SLA alerts
FR-04	Managers should track ticket status in real time
FR-05	Escalation workflow should be automated
FR-06	Dashboard should display operational KPIs

 Non-Functional Requirements

ID	Requirement
NFR-01	System should reduce response delays
NFR-02	Dashboard should refresh in real time
NFR-03	Ticket data should be secure
NFR-04	System should support high ticket volume

Root Cause Analysis

Problem	Root Cause
Delayed responses	Manual ticket assignment
SLA violations	No prioritization system
Multiple follow-ups	Poor communication
Slow resolution	Unclear escalation process
Ticket backlog	Uneven workload distribution

SWOT ANALYSIS

Strengths	Weaknesses
Existing support team	Manual workflows
Ticket tracking exists	Slow response time
Customer support available	Poor SLA monitoring

Opportunities	Threats
Automation implementation	Customer dissatisfaction
Real-time dashboards	Increased ticket volume
AI-based prioritization	Competitive pressure

GAP ANALYSIS

Current State (AS-IS)	Future State (TO-BE)	Gap
Manual assignment	Automated assignment	Delayed routing
No prioritization	Severity-based priority	SLA breaches
Manual escalation	Automated escalation	Slow resolution
Limited tracking	Real-time dashboard	Poor visibility
